1.1	Examples	2
1.1.1	$\lim_{x \rightarrow \infty} \frac{5x^2 - \sin(3x)}{x^2 + 10}$	2
2	Intermediate Value Theorem	2
3	Weierstrauss Theorem	2

1 Sandwich Theorem

1.1 Examples

$$1.1.1 \quad \lim_{x \rightarrow \infty} \frac{5x^2 - \sin(3x)}{x^2 + 10}$$

$$\begin{aligned} \frac{5x^2 - 1}{x^2 + 10} &\leq \frac{5x^2 - \sin(3x)}{x^2 + 10} && \leq \frac{5x^2 + 1}{x^2 + 10} \\ \therefore \frac{5 - \frac{1}{x^2}}{1 + \frac{10}{x^2}} &\leq \frac{5x^2 - \sin(3x)}{x^2 + 10} && \leq \frac{5 + \frac{1}{x^2}}{1 + \frac{10}{x^2}} \end{aligned}$$

$$\therefore \lim_{x \rightarrow \infty} \frac{5x^2 - \sin(3x)}{x^2 + 10} = 5$$

2 Intermediate Value Theorem

If f is continuous over $[a, b]$, then, $\forall h$ between $f(a)$ and $f(b)$, $\exists c \in [a, b]$, s.t. $f(c) = h$

3 Weierstrauss Theorem

If f is continuous over $[a, b]$, then, f has a maximum and a minimum in $[a, b]$.
