1 Arithmetic of Limits

1.1 Theorem: If $\lim_{x \rightarrow x_0} f(x) = a$ and $\lim_{x \rightarrow x_0} g(x) = b$, then,

$$\lim_{x \rightarrow x_0} (f(x) \pm g(x)) = a \pm b, \lim_{x \rightarrow x_0} (f(x) \cdot g(x)) = a \cdot b, \lim_{x \rightarrow x_0} \frac{f(x)}{g(x)} = \frac{a}{b}$$

1.2 Examples

1.2.1 Example 1

$$\begin{aligned} \lim_{x \rightarrow \infty} \frac{x^2 - 4x + 2}{x^2 + 4} &= \lim_{x \rightarrow \infty} \frac{\frac{x^2 - 4x + 2}{x^2}}{\frac{x^2 + 4}{x^2}} \\ &= \lim_{x \rightarrow \infty} \frac{1 - \frac{4}{x} + \frac{2}{x^2}}{1 + \frac{4}{x^2}} \\ &= \frac{1}{1} \\ &= 1 \end{aligned}$$

1.2.2 Example 2

$$\lim_{x \rightarrow 1} \frac{\sqrt[3]{x} - 1}{\sqrt[4]{x} - 1}$$

Let $x = t^12$

$$\begin{aligned} \therefore \lim_{x \rightarrow 1} \frac{\sqrt[3]{x} - 1}{\sqrt[4]{x} - 1} &= \lim_{t \rightarrow 1} \frac{t^4 - 1}{t^3 - 1} \\ &= \lim_{t \rightarrow 1} \frac{(t - 1)(t^3 + t^2 + t + 1)}{(t - 1)(t^2 + t + 1)} \\ &= \lim_{t \rightarrow 1} \frac{t^3 + t^2 + t + 1}{t^2 + t + 1} \\ &= \frac{4}{3} \end{aligned}$$

1.3 Infinite Arithmetic

$$\frac{\text{“}\infty\text{”}}{\text{“}a\text{”}} = \begin{cases} +\infty; a > 0 \\ -\infty; a < 0 \end{cases}$$
$$\frac{\text{“}a\text{”}}{\text{“}\infty\text{”}} = 0$$

2 Useful Limits

If $\lim_{x \rightarrow x_0} g(x) = 0$,

$$\lim_{x \rightarrow x_0} (1 + g(x))^{\frac{1}{g(x)}} = e$$

$$\lim_{x \rightarrow \infty} \left(1 + \frac{1}{x}\right)^x = e$$

$$\lim_{x \rightarrow 0} (1 + x)^{\frac{1}{x}} = e$$

$$\lim_{x \rightarrow \infty} \left(1 + \frac{a}{x}\right)^x = e^a$$

$$\lim_{x \rightarrow 0} \frac{\sin x}{x} = 1$$

3 Sandwich Theorem

If, in a punctured neighbourhood of x_0 we have

$$g(x) \leq h(x) \leq f(x)$$

and

$$\lim_{x \rightarrow x_0} f(x) = \lim_{x \rightarrow x_0} g(x) = l$$

then

$$\lim_{x \rightarrow x_0} h(x) = l$$

4 Continuity

A function f is continuous at x_0 if $\lim_{x \rightarrow x_0} f(x) = f(x_0)$.

4.1 Types of Discontinuity

Let $f(x)$ be defined in a neighbourhood of x_0 .

4.1.1 Removable Discontinuity

$$\lim_{x \rightarrow x_0} f(x) \neq f(x_0)$$

4.1.2 Discontinuity of First Kind

$$\lim_{x \rightarrow x_0+} f(x) \neq \lim_{x \rightarrow x_0-} f(x)$$

4.1.3 Discontinuity of Second Kind

Atleast one of the one-sided limits of $f(x)$ at x_0 does not exist. Note that the limits are defined as finite numbers only.
